About the Book

Climate Change & Navel War

- A Scientific Assessment -

This book has laid emphasis on presentation and assessing details. The book seeks to demonstrate that the industrialized world contributed to at least two significant climatic changes during the 20th century, viz. WWI and WWII. This became particularly obvious when an arctic winter befell Northern Europe only four months after World War II had started, ending a pronounced temperature rise all over the Northern Hemisphere which had started with the end of WWI in 1918.

The book edition presents a wealth of references from newspaper and scientific articles from before the two World Wars and during the wars, which have nowhere been ever presented before. In a conscience step by step approach the thesis is convincingly presented. The work is a big contribution for ocean affairs and certainly will inject 'perestroika'¹ to climate change issue and debate.

Review on AMAZON/UK by: Frank Loebert:

Arnd Bernaerts postulates and substantiates a fascinating theory on the impact of naval warfare on climate in the past century, a theory which appears ever more credible upon studying the scientific material Bernaerts presents. Knowing that everything on the globe is interconnected, Bernaerts work on cause and effect requires serious consideration by scientists, politicians, historians and perhaps also jurists. Bernaerts is to be commended for his bold venture into an area that is novel to many and for making his findings known to the wider public.

¹ NEW THINKING , Perestroika (Russian meaning alter, rebuild and/or reshape).
